Red Hat Certified System Administrator & Engineer: Training Guide And A Quick Deskside Reference, Exams EX200 & EX300

Synopsis

* Detailed coverage of ALL official exam objectives* Includes 100+ hands-on exercises, 550+ exam review questions, 70+ practice labs, and 2 full practice sample exams* Proven in-class training resource

This book is based on Red Hat® Enterprise Linux 6 and it provides preparatory material for the RHCSA (EX200) and the RHCE (EX300) exams. This book is divided into two sections based on the RHCSA and RHCE exam objectives. It includes 21 chapters and is structured to facilitate readers to grasp concepts, understand implementation procedures, and learn commands, tools, configuration files, log files, and service daemons involved.

The RHCSA section (chapters 1 to 13) covers all the topics required to prepare for the RHCSA exam. Information presented includes general Linux concepts, basic commands, archiving, compression, file manipulation, file security, text editors, shell features, awk programming, hardware management, local installation, package administration, virtualization, network installation, automated installation, boot procedures, kernel management, user & group administration, disk partitioning, file system & swap management, basic firewall, SELinux, TCP Wrappers, basic networking, network interfaces, and DNS, DHCP, and LDAP client configuration.

The RHCE Section (chapters 14 to 21) covers all the topics required to prepare for the RHCE exam. Information presented includes automating with scripting, building an rpm package, resource utilization reporting, network logging, advanced firewall, iSCSI, DNS server, Kerberos, routing, Internet services, kernel parameters, NTP client, email, NFS, Samba, FTP, Apache web server, and secure shell server.

Customer Reviews

I bought this title after having toted Jang's RHCSA/RHCE Certification Study Guide around for a couple of years. Jang's book is regarded as the standard when it comes to exam preparation, but for RHEL 5 I found Ghori's previous edition to be more helpful in a number of ways, specifically in its straightforward presentation of material and almost cookbook how-to of different topics. This latest edition, recrafted for RHEL 6, is another good title for reference and exam preparation. Ghori's approach when assembling this book is clear â " present the material in a very direct, understandable and sometimes exhaustive way. Every topic is presented very methodically and has no shortage of explanation attached, whether it's setting up an ftp server or running the ls command. Cases where there isn't enough information are few. The material is broken down in logical chapters in two groups â " RHCSA-specific topics and RHCE-specific topics. In the RHCSA section there are: Local Installation, Basic Linux Commands, Files and Directories, Package Management, Virtualization and Network Installation, Linux Boot Process & Kernel Management, Disk Partitioning, File Systems & Swap, Users & Groups, Firewall & SELinux, and finally Networking/Network Interfaces & DNS/DHCP/LDAP Clients. In the RHCE section there are: Shell Scripting/Building an RPM Package/iSCSI, Advanced Firewall/TCP Wrappers/Usage Reporting & Remote Logging, Routing/Kerberos/DNS Server, Internet Services/Kernel Parameters/NTP, Electronic Mail, Network File System (NFS), Samba & FTP, and finally Apache Web Server (HTTP) & Secure Shell Server (ssh). Every chapter (including chapter one) has a small set of labs and a large number of review questions for practice and exam preparation.
